

Abseilers are multi talented across many specialist trades

Antac's abseilers skill sets are not just limited to window cleaning but are multi talented including specialist construction trade skills which have proved invaluable for clients. For instance, at DWP in Exeter, our abseiling teams painted the inner courtyards where access machinery was inaccessible. At the Royal Surrey County NHS Hospital in Guildford, they were present to install pigeon spiking to improve their pest control and stop pigeons nesting on atrium edges in order to meet environmental objectives. At John Radcliffe Hospital in Oxford (pictured), the team, as an emergency, removed heating pipework along a high wall along a towering wall in a busy public area and reinstalled a bespoke heating system. At the same time, this removed any danger to the public and hospital staff while protecting and restoring the Hospital's valued mural painting at minimum cost.

However, their tasks are extremely varied with assignments such as: replacing all window actuators at a Head office within the financial services sector; providing rescue cover for the inspection of ladders, radio masts and roofs for MoD sites exemplified by fitting sun pipes at RNAS Yeovilton (see picture). They have jet washed the cladding at the Macmillan Cancer Centre in Central London through the use of vulpex soap and wax to provide a polished finish; sanded down and painted window ledges, then installing pigeon spikes at Royal Surrey Hospital; changed the existing lighting to LED at a major London Airport.

Our abseiling teams have a multitude of skill sets in varying environments including MoD, hospitals, education, Home Office and DWP buildings, financial institutions and large corporate, commercial organisations which include:-

- Painting / Decorating
- Cladding, fascia and gutter cleans
- Eyebolt installation and testing
- Lightning Protection System maintenance and testing
- Refurbishment concrete repairs
- High rise maintenance and servicing (e.g. pigeon spiking)
